Contents

Book I

List of Figures xvi

List of Tables xvii

Foreword xix

Preface xxi

Chapter 1 Introduction 1

1.1 A brief history (of nearly half a century) 1

1.2 Today's systems 8

1.3 Working with this book 13

1.3.1 What's where 13

1.3.2 Typographic conventions 15

1.3.3 Using the examples 18

Chapter 2 The Structure of a LaTeX Document 21

2.1 The overall structure of a source file 22

2.1.1 Spoiler alert — The \DocumentMetadata command 23

2.1.2 Processing of options of the document class and packages . . 24

2.1.3 Front, main, and back matter 26

2.1.4 Splitting the source document into several files 28

2.1.5 askinclude — Managing your inclusions 30

2.1.6 tagging — Providing variants in the document source 30

2.2 Sectioning commands 32
2.2.1 Numbering headings 34
2.2.2 Changing fixed heading texts 36
2.2.3 Introduction to heading design 37
2.2.4 quotchap, epigraph — Mottos on chapters and sections 38
2.2.5 indentfirst — Indent the first paragraph after a heading 39
2.2.6 nonumonpart — No page numbers on parts 40
2.2.7 titlesec — A package approach to heading design 40
2.2.8 Formatting headings — LaTeX's internal low-level methods. . . . 51
2.3 Table of contents structures 54
2.3.1 tocdata — Providing extra data for the TOC 56
2.3.2 titletoc — A high-level approach to contents list design 59
2.3.3 multitoc — Setting contents lists in multiple columns 70
2.3.4 LaTeX's low-level interfaces 70
2.4 Managing references 75
2.4.1 varioref — More flexible cross-references 79
2.4.2 cleveref — Cleverly formatted references 86
2.4.3 nameref — Non-numerical references 93
2.4.4 showkeys, refcheck — Displaying & checking reference keys . . 93
2.4.5 xr — References to external documents. 95
2.4.6 hyperref — Active references 96
2.5 Document source management. 108
2.5.1 Combining several files. 109
2.5.2 Document archival information 110
2.5.3 snapshot, bundledoc — Document archival and verification. . . 111
2.5.4 mkjobtexmf — Providing a minimal TeX file tree 113
2.5.5 The rollback concept for LaTeX and individual packages 114

Chapter 3 Basic Formatting Tools — Paragraph Level 119

3.1 Shaping your paragraphs 120
3.1.1 ragged2e — Improving unjustified text 123
3.1.2 nolbreaks — Preventing line breaks in text fragments. 125
3.1.3 microtype — Enhancing justified text 126
3.1.4 parskip — Adjusting the look and feel of paragraphs 137
3.1.5 setspace — Changing interline spacing 139
3.1.6 lettrine — Dropping your capital 141
3.1.7 Alphabets for initials 145
3.1.8 magaz — Special handling of the first line 146
3.1.9 fancypar — Fancy layouts for individual paragraphs. 147
3.2 Dealing with special characters 147
3.2.1 ellipsis, lips — Marks of omission 148
3.2.2 extdash and amsmath — Dashes in text 149
3.2.3 underscore — Making that character more usable. 151
3.2.4 xspace — Gentle spacing after a macro 152

3.3 Generated or specially formatted text 154
3.3.1 fmtcount — Ordinals and cardinals 154
3.3.2 acro — Managing your abbreviations and acronyms. 156
3.3.3 xfrac — Customizable $^{\text{text}}/_{\text{fractions}}$ 164
3.3.4 siunitx — Scientific notation of units and quantities 167
3.4 Various ways of highlighting and quoting text. 177
3.4.1 Change case of text intelligently (formerly textcase) 178
3.4.2 csquotes — Context-sensitive quotation marks 179
3.4.3 embrac — Upright brackets and parentheses 188
3.4.4 ulem — Emphasize and copy-edit via underline 189
3.4.5 dashundergaps — Produce fill-in forms 190
3.4.6 microtype & soul — Letterspacing or stealing sheep 191
3.4.7 url — Typesetting URLs, path names, and the like. 198
3.4.8 uri — Typesetting various types of URIs. 202
3.5 Footnotes, endnotes, and marginals 204
3.5.1 Using standard footnotes. 205
3.5.2 Customizing standard footnotes 208
3.5.3 footmisc — Various footnotes styles 210
3.5.4 footnoterange — Referencing footnote ranges 216
3.5.5 fnpct — Managing footnote markers and punctuation. 216
3.5.6 perpage — Resetting counters on a “per-page” basis 218
3.5.7 manyfoot, bigfoot — Independent footnotes 220
3.5.8 parnotes — Present the notes inside the galley 226
3.5.9 ftnright — Right footnotes in a two-column environment 228
3.5.10 enotez — Endnotes, an alternative to footnotes. 228
3.5.11 Marginal notes 232
3.5.12 marginnote — An alternative to `\marginpar`. 234
3.5.13 snotez — Numbered or otherwise marked side notes 235
3.6 Support for document development. 237
3.6.1 todonotes — Adding todos to your document. 237
3.6.2 fixme — A slightly different approach to todos 242
3.6.3 changes — A set of typical editorial commands 245
3.6.4 pdfcomment — Using PDF annotations and tool tips 250
3.6.5 vertbars — Adding bars to paragraphs 251

Chapter 4 Basic Formatting Tools — Larger Structures 253

4.1 Lists 254
4.1.1 Using and modifying the standard lists. 254
4.1.2 LaTeX’s generic list environments 258
4.1.3 enumitem — Extended list environments 261
4.1.4 amsthm — Providing headed lists. 281
4.1.5 thmtools — Advanced theorem declarations 284
4.1.6 tasks — Making horizontally orientated lists 289
4.1.7 typed-checklist — Developing and maintaining checklists. . . . 292

4.2 Simulating typed text 296
4.2.1 Displaying spaces in verbatim material 297
4.2.2 Simple verbatim extensions 298
4.2.3 upquote — Computer program style quoting 302
4.2.4 fancyvrb, fvextra — Verbatim environments on steroids 303
4.2.5 listings — Pretty-printing program code. 322
4.3 Lines and columns 333
4.3.1 lineno — Numbering lines of text 334
4.3.2 paracol — Several text streams aligned 339
4.3.3 multicol — A flexible way to handle multiple columns 351
4.3.4 multicolrule — Custom rules for multicolumned pages 361
4.4 Generating sample texts 361
4.4.1 lipsum and friends — Generating text samples 361
4.4.2 blindtext — More elaborate layout testing 363

Chapter 5 The Layout of the Page 365

5.1 Geometrical dimensions of the layout 366
5.2 Changing the layout 368
5.2.1 layouts — Displaying your layout 371
5.2.2 A collection of page layout packages 374
5.2.3 typearea — A traditional approach 375
5.2.4 geometry — Layout specification with auto-completion 377
5.2.5 lscape — Typesetting individual pages in landscape mode . . . 384
5.2.6 savetrees — Options to reduce the document length 384
5.3 Dynamic page data: page numbers and marks 385
5.3.1 LaTeX page numbers 385
5.3.2 lastpage — A way to reference it 386
5.3.3 chappg — Page numbers by chapters 387
5.3.4 LaTeX's legacy mark commands 388
5.3.5 LaTeX's new mark mechanism 390
5.4 Page styles 395
5.4.1 The low-level page style interface. 397
5.4.2 fancyhdr — Customizing page styles 398
5.4.3 truncate — Truncate text to a given length 405
5.4.4 continue — Help with turning pages 407
5.5 Page decorations and watermarks 409
5.5.1 draftwatermark — Put a visible stamp on your document 409
5.5.2 crop — Producing trimming marks 411
5.6 Visual formatting 414
5.6.1 Standard tools for page explicit page breaking 414
5.6.2 Running pages and columns short or long 415
5.6.3 addlines — Adjusting whole double spreads 416
5.6.4 nextpage — Extensions to `\clearpage` 418

5.6.5 needspace — Conditionally start a new page 419
5.6.6 Avoiding widows and orphans 420
5.6.7 widows-and-orphans — Finding all widows and orphans 424
5.6.8 \looseness — Shortening or lengthening paragraphs 427
5.7 Doing layout with class 429
5.7.1 KOMA-Script — A drop-in replacement for article et al. 429
5.7.2 memoir — Producing complex publications 430

Chapter 6 Tabular Material 431

6.1 Standard LaTeX environments 432
6.1.1 Using the tabbing environment 433
6.1.2 tabto — An alternative way to tab stops 434
6.1.3 Using the tabular environment 436
6.2 array — Extending the tabular environments 437
6.2.1 The behavior of the \\ command 437
6.2.2 Examples of preamble specifiers 438
6.2.3 Defining new column specifiers 445
6.3 Calculating column widths 446
6.3.1 tabularx — Automatic calculation of column widths 448
6.3.2 tabulary — Column widths based on content 450
6.3.3 Differences between tabular*, tabularx, and tabulary . . 452
6.3.4 Managing tables with wide entries 453
6.3.5 widetable — An alternative to tabular* 453
6.4 Multipage tabular material 456
6.4.1 supertabular — Making multipage tabulars 456
6.4.2 longtable — Alternative multipage tabulars 459
6.4.3 xltabular — Marriage of tabularx and longtable 463
6.4.4 Problems with multipage tables (all packages) 464
6.5 Color in tables 466
6.6 Customizing table rules and spacing 467
6.6.1 Colored table rules 467
6.6.2 boldline — Bolder table rules 468
6.6.3 arydshln — Dashed rules 469
6.6.4 hhline — Combining horizontal and vertical lines 470
6.6.5 booktabs — Formal ruled tables 471
6.6.6 bigstrut — Spreading individual table lines apart 473
6.6.7 cellspace — Ensure minimal clearance automatically 474
6.7 Other extensions 476
6.7.1 multirow — Vertical alignment in tables 476
6.7.2 diagbox — Making table cells with diagonal lines 479
6.7.3 dcolumn — Decimal column alignments 481
6.7.4 siunitx — Scientific numbers in tables 484
6.7.5 fcolumn — Managing financial tables 487

6.8 Footnotes in tabular material 491
6.8.1 Using minipage footnotes with tables 491
6.8.2 threeparttable — Setting table and notes together 492
6.9 keyvaltable — Separating table data and formatting 494

Chapter 7 Mastering Floats 505

7.1 An overview of LaTeX's float concepts 506
7.1.1 LaTeX float terminology 506
7.1.2 Basic behavioral rules of LaTeX's float mechanism 508
7.1.3 Consequences of the algorithm. 512
7.1.4 fltrace — Tracing the float algorithm 518
7.2 Float placement control 519
7.2.1 fewerfloatpages — Improving LaTeX's float algorithm 519
7.2.2 placeins — Preventing floats from crossing a barrier 524
7.2.3 afterpage — Taking control at the page boundary 525
7.2.4 endfloat — Placing figures and tables at the end 525
7.3 Extensions to LaTeX's float concept 528
7.3.1 float — Creating new float types 529
7.3.2 Captions for nonfloating figures and tables 532
7.3.3 rotating, rotfloat — Rotating floats 533
7.3.4 wrapfig — Inline floats, wrapping text around a figure 535
7.4 Controlling the float caption. 538
7.4.1 caption — Customizing your captions. 540
7.4.2 subcaption — Substructuring floats 551
7.5 Key/value approaches for floats and subfloats. 560
7.5.1 hvfloat — Sophisticated caption placement control and more . . 560
7.5.2 keyfloat — Bringing most packages under one roof 567

Chapter 8 Graphics Generation and Manipulation 575

8.1 LaTeX's image loading support 576
8.1.1 Options for graphics and graphicx 577
8.1.2 The \includegraphics syntax in the graphics package . . . 578
8.1.3 The \includegraphics syntax in the graphicx package . . . 580
8.1.4 Setting default key values for the graphicx package 585
8.1.5 Declarations guiding the inclusion of images. 586
8.2 Manipulating graphical objects in LaTeX. 587
8.2.1 Image and box manipulations with graphics and graphicx . . . 587
8.2.2 overpic — Graphic annotation made easy 593
8.2.3 adjustbox — Box manipulation with a key/value interface . . . 595
8.3 Producing (fairly) portable line graphics 602
8.3.1 A kernel picture environment enhancement 602
8.3.2 pict2e — An extension of LaTeX's picture environment 602
8.3.3 bxeepic — A differently enhanced picture environment. . . . 608
8.3.4 Special-purpose languages 612

8.3.5 qrcode — Generating Quick Response codes 612
8.4 Flexible boxes for multiple purposes 614
8.4.1 tcolorbox — The basic usage 614
8.4.2 Extending tcolorbox through libraries 619
8.4.3 Defining new tcolorbox environments and commands 626
8.4.4 Special tcolorbox applications 628
8.5 tikz — A general-purpose graphics system 631
8.5.1 Basic objects 633
8.5.2 Transformations and other operations 642
8.5.3 Going further 646

Chapter 9 Font Selection and Encodings 647

9.1 Introduction 648
9.1.1 The history of LaTeX's font selection scheme (NFSS) 648
9.1.2 Input and output handling in TeX systems over the years 649
9.2 Understanding font characteristics 652
9.2.1 Monospaced and proportional fonts 652
9.2.2 Serifed and sans serif fonts 653
9.2.3 Font families and their attributes 653
9.2.4 Font encodings 657
9.3 Using fonts in text 658
9.3.1 Standard LaTeX font commands 659
9.3.2 Font commands versus declarations 666
9.3.3 Combining standard font commands 668
9.3.4 Accessing all characters of a font 669
9.3.5 LaTeX 2.09 font support — Compatibility for really ancient documents 670
9.3.6 Changing the default text fonts 670
9.3.7 relsize, scalefnt — Relative changes to the font size 675
9.4 Using fonts in math 676
9.4.1 Special math alphabet identifiers 677
9.4.2 Text font commands in math 682
9.4.3 Mathematical formula versions 682
9.5 Standard LaTeX font support 683
9.5.1 Computer Modern, Latin Modern — The LaTeX standard fonts . . 684
9.5.2 PSNFSS and TeX Gyre — Core PostScript fonts for LaTeX 688
9.5.3 A note on baselines and leading 691
9.5.4 inputenc — Explicitly selecting the input encoding 692
9.5.5 fontenc — Selecting font encodings 693
9.5.6 Additional text symbols not part of OT1 or T1 encodings . . . 694
9.5.7 exscale — Scaling large Computer Modern math operators . . . 704
9.5.8 tracefnt — Tracing the font selection 704
9.5.9 nfssfont.tex — Displaying 8-bit font tables and samples 705

9.6 fontspec — Font selection for Unicode engines 705
9.6.1 Setting up the main document font families 706
9.6.2 Setting up additional font families 711
9.6.3 Setting up a single font face 711
9.6.4 Interfacing with core NFSS commands 712
9.6.5 Altering the look and feel of fonts 713
9.6.6 General configuration options 727
9.6.7 unicodefonttable — Displaying font tables for larger fonts . . . 728
9.7 The low-level NFSS interface 730
9.7.1 Setting individual font attributes 731
9.7.2 Setting several font attributes 738
9.7.3 Automatic substitution of fonts. 738
9.7.4 Substituting the font family if unavailable in an encoding . . . 739
9.7.5 Using low-level commands in the document 740
9.8 Setting up new fonts for NFSS. 740
9.8.1 Declaring new font families and font shape groups. 741
9.8.2 Modifying font families and font shape groups 746
9.8.3 Declaring new font encoding schemes 747
9.8.4 Internal file organization 748
9.8.5 Declaring new fonts and symbols for use in math 749
9.9 LaTeX's encoding models. 754
9.9.1 Character data within the LaTeX system 754
9.9.2 LaTeX's internal character representation (LICR) 757
9.9.3 Input encodings 758
9.9.4 Output encodings 760
